**Reasons for allowance**

The claim language is considered to be limited to a power supply cooperating with appropriate electrodes that activate on the one hand only wanted to know vibrations and secondly only transverse vibrations in any particular piezoelectric layer. These vibrations can be simultaneously produced to achieve an elliptical output. The prior art, as pointed out in applicants arguments, produces only simultaneous wanted to did all and transverse vibrations within each individual slab of piezoelectric material. A complete research of all pertinent areas, while finding prior art of general interest, did not produce any reference teaching the above highlighted claimed distinctions.
